1. Story

At the traditional University of Leipzig Medical Center more than 400,000 inpatients and outpatients are treated every year. For taking care of the well-being of the patients and managing the processes behind the scenes more than 6,000 staff members are employed at the maximum care hospital.

In one of the most modern clinics in Europe, not only the structural and technical infrastructure has to be updated regularly, but also the IT landscape. Thereby the access permission management is a really important point. The manual maintenance of access permissions with conventional Windows Board Tools became more and more complex and unclear, so that a comfortable and efficient solution was sought. The project team around project leader Ivette Schmidt-Morich came across with the **BAYOOSOFT Access Manager** during their internet research. The tool of the Darmstadt-based software manufacturer **BAYOONET AG**, which has been in business for more than 18 years, can be easily adapted to individual customer need due to its modular structure.

As the central component of the Access Manager, the Self Service Portal enables the end users to independently apply for access permissions without having involved the

second-level support. *«This does not mean more effort for the employees at all. In contrast, they now have the opportunity to apply quickly and easily for new access permissions and view the status of their requests in the portal.»*, confirms project leader Ivette Schmidt-Morich. *«The Access Manager also significantly reduces the workload of the data managers. They can see at a glance which access permissions are assigned in their area of responsibility and can process new access permission requests with just a few clicks.»*

«With the help of the BAYOOSOFT Access Manager, we were able to transfer the structures of our file server, which had grown over many years, to a state-of-the-art compliance with all applicable requirements. The administrators in the second level support can now contribute their special knowledge to other important topics instead of having to deal with recurring access permission assignments.», praises Daniel Pfuhl, Head of System Management. *«Due to the very well-coordinated application components of the Access Manager, a high level of technical reliability in system operations is guaranteed.»*, adds IT administrator Marcus Möwes.

Success Story | No Chance for Hackers - access permissions are reliably managed by the BAYOOSOFT Access Manager at the University of Leipzig Medical Center.

The implementation of the Access Manager in the running business of the University of Leipzig Medical Center went smoothly. The directories with all retaining rights were imported step by step into the software. After the import, the folder managers and data managers checked the assigned rights and made the first changes by using the Access Manager.

«During the entire project period the Access Manager Support Team was always available immediately and responded to our individual wishes and needs.», reports project leader Ivette Schmidt-Morich. *«I have already recommended the BAYOOSOFT Access Manager several times and will continue to do so in the future.»*

2. Access Manager

The BAYOONET AG is a German software company established on the market since 2001 and the manufacturer of the Access Manager within BAYOOSOFT, our business unit for Management Software. Our solutions are aimed at heavily regulated sectors and critical infrastructures in enterprise environments. Our quality management processes - certified in accordance with ISO 9001 and ISO 13485 by TÜVHessen - reflect our passion for sustainable enterprise solutions and distinct customer focus.

The BAYOOSOFT Access Manager (BAM) is the automated software solution for simple and transparent access management for unstructured data relating to file servers, SharePoint, and Active Directory, also enabling the separate access management of unstructured data in critical infrastructures according to IT security legislation. The Access Manager can be scaled virtually limitlessly. It is compatible with multiple languages and designed for use across globally distributed locations. Modularity allows the solution to be used according to customers' needs. Besides file server and SharePoint modules, modules are available for file server accounting and as interfaces to external programs and workflows.

The development and support for our software solutions are performed exclusively in Germany by our company's qualified staff.
