MANAGEMENT SOFTWARE

## Success Story

ETECTURE is one of the leading technology companies in Germany and supports its customers on their way into the digital future - from the initial idea to the conception and implementation to the commissioning of the finished solution. As specialists, we offer strategic consulting, customized software development and implementation from a single source. The **ETECTURE GmbH** was founded in early 2003 by a team of experienced software specialists and consultants. Our extensive project experience across all industries and business sectors enables us to provide customers with tried and tested ideas and technologies.

We are a constantly growing company with currently 150 employees at 3 locations in Germany. Therefore the demands for security on maximum flexibility are also increasing - time naturally plays a major role. The access to our fileservers must always be guaranteed, at the same we need the auditing of the access permissions.

Here we came across with the **Access Manager** of the **BAYOONET AG**. Up to now, access permissions were assigned via Active

Directory groups. However, this became increasingly confusing as the number of shares and users constantly grew. Also, for the growing admin team it became more and more difficult to recognize who is responsible for which area and who gets which permission on the grown folder structure. This resulted in a flood of e-mails and delays in the business processes.

In addition, a certain amount of discipline is also required to ensure that access permissions are not simply set up on demand calls in daily business. Inadequate documentation is another problem, so much time is wasted by checking access permissions. As a result, we were faced with an unsatisfactory starting situation that required a solution.

Looking back, we can say we have found an absolutely suitable solution with the **Access Manager**. The approval process of access permissions was accelerated considerably, since the requests are directly addressed to the folder owner or his / her representative. The ticket creation in this area and the processing by the admins are completely eliminated. The employees in turn no longer have to wait for the ticket processing to gain access permissions to required shares.

This concept makes it possible to work independently of traditional service times and thus supports modern working time models at the same time.

*«In particular, the option of always having an overview of the current access permissions on one's own folder, as well as the possibility of proactively setting permissions at changes in the team structure, was very well received.»*, reports Boris Mengler, IT-Lead at ETECTURE. He adds: *«The department heads, who are usually deployed as folder owners, quickly accepted the **Access Manager** because the tool is easy to use and all the advantages are visible at a glance. So far, there only has been positive feedback.»*

The installation of the Access Manager proved to be relatively simple for our administrators. Small hurdles were quickly overcome in cooperation with the support of the **BAYOONET AG**. In addition, the problem of inadequate documentation was solved by the clearly arranged reports and the possibility for folder owners to take a look on an overview of all assigned access permissions in their area directly in the portal of the tool. This means we now have a permanent revision-secure documentation. Also, the transfer of responsibilities to the heads of departments and thus away from the admins was an important und sensible step.

## Access Manager

---

The BAYOONET AG is a German software company established on the market since 2001 and the manufacturer of the Access Manager within BAYOOSOFT, our business unit for Management Software. Our solutions are aimed at heavily regulated sectors and critical infrastructures in enterprise environments. Our quality management processes - certified in accordance with ISO 9001 by TÜV-Hessen - reflect our passion for sustainable enterprise solutions and distinct customer focus.

The BAYOOSOFT Access Manager (BAM) is the automated software solution for simple and transparent access management for unstructured data relating to file servers, SharePoint, and Active Directory, also enabling the separate access management of unstructured data in critical infrastructures according to IT security legislation.

The Access Manager can be scaled virtually limitlessly. It is compatible with multiple languages and designed for use across globally distributed locations. Modularity allows the solution to be used according to customers' needs. Besides file server and SharePoint modules, modules are available for file server accounting and as interfaces to external programs and workflows.

The development and support for our software solutions are performed exclusively in Germany by our company's qualified staff.
